24 December. Individually flights were made between 9:30 and 3:30 p.m.

25 December. Between 11 a.m. and 1:15 p.m., three IL-28s made flights of 30 to 40 minutes.

26 December to 1 January. There was no air activity.

2. According to official records, 689 persons were employed at the Werneuchen airfield on 8 December.

. The following air activity and aircraft were observed at Werneuchen airfield between 15 December 1952 and 18 January 1953:

25X1

15 December. There was an almost compact overcast at an altitude of about 800 meters. At about 1:30 p.m., fog developed. There was no air activity.

16 December. At about 10 a.m., the snow storm abated. After 10:30 a.m., take-offs were made by IL-28s and UIL-28s. Air activity was terminated by about 2:30 p.m.

17 to 19 December. There was no air activity, the weather being usually bad.

29 and 30 December. There was heavy snowfall and visibility below 1,000 meters. No air activity was observed.

6 January. Between 11:30 a.m. and 2:30 p.m., an unidentified number of II-28s made take-offs and individual flights of about 30 minutes. Visibility was about 1.200 meters and the base of clouds was at an altitude of about 600 meters.

25X1

7 January. There was no air activity.

9 January. After 9:30 a.m., individual take-offs were made by jet bombers in hazy weather. Air activity was discontinued at 2 p.m. At noon, a take-off was made by a transport plane.

12 January. There was no air activity. The weather was hazy.

13 January. Between 9 a.m. and 2 p.m., flying was practiced. Visibility was about 2 km and the base of clouds at an altitude of about 600 meters.

14 January. Between 1 and 3 p.m., air activity was observed from outside the field.

15 to 18 January. No air activity was observed. The facilities of observation were limited.

Whenever flying was practiced at Werneuchen, 2 radio trucks, 1 fire truck with trailer, 1 ambulance, and 1 or 2 sedans parked at the end of the runway. From the absence of these vehicles the workers at the field inferred that there was no air activity, so they might cross the runway. During air activity the runway was also guarded by a number of sentries who stood along the edge of the runway at intervals of about 500 meters. The radio trucks were occupied by soldiers with earphones. One radio truck had a box-shaped superstructure with windows. At the front of the superstructure it mounted a mast, about 2.5 meters high, from whose top a single wire sloped

3		
	-	

to the rear edge of the box-shaped truck. The other radio truck was equipped with a rod, about 3 meters high, which was set up approximately in the center of the box-shaped superstructure and mounted on its top a horizontal circular antenna about 90 cm in diameter. The antenna consisted of a wire bent into a circle whose center was intersected by two other vires forming a right angle and supporting the circular wire. The intersection of the two inner wires topped the rod projecting from the box-shaped superstructure.

- 4. Except for minor improvements, the shrapnel proof aircraft revetments at the field were completed by 19 December 1952. Twenty-four revetments were located on the northern taxistrip, 3 on the taxistrip directly southeast of the runway and 3 on the taxistrip running from the west end of the runway to the south.
- 5. In mid-December 1952, source learned that about 60 percent of the labor force employed at Werneuchen airfield was to be transferred or dismissed. Rumors said that workers eligible for transfer were to be reassigned to the construction projects in Parchim, Tutow, and Schorfheide the contracts for which were given to the Bauunion Brandenburg. In this connection, Ruegen and railroad construction in the Berlin area were also mentioned.
- 6. After 12 January, the passes of the vorkers employed at verneuchen airfield were checked by a Soviet officer accompanied by a Soviet soldier. According to rumors, this measure will be maintained.
- 7. In late December, 6 AA guns probably 85-mm guns were observed in the northwestern corner of the field. The guns were dug in individually. They were arranged in two curved parellel lines of three guns each at intervals of 100 to 150 meters. The guns were interconnected by communication trenches, some of which were covered with timber and soil. The quarters of the crews were underground installations, which were entered directly from the emplacements. They were identified from the smokestacks which usually emitted smoke. During two practices, source observed that the crew of each gun included one officers, one NCO and eight EM. In the course of the one practice, source saw a range finder in the middle of the emplacements at which two soldiers stood. Twelve trucks were purked in an open shed west of these AA gun emplacements. They were never observed being operated. One light AA gum emplacement each was also located in the southwestern and the southeastern corner of the airfield. In late December, communication trenches and quarters, similar to those of the 85-mm AA gun emplacements, were under construction there. This work was done only by Soviets.4
- In late 1952, two fuel dumps were located at the field. The one, which was officially referred to as the "Tanklager Sued", Southern Fuel Dump, by the construction staff, was laid out at the end of the railroad spur track running past the southern side of the hangars, It consisted of 48 dug-in tanks. The masonry as well as levelling and grading were largely completed. In early January, this installation was still empty. Another fuel dump which was officially referred to as the "Tanklager Nord", Northern Fuel Dump, was located north of the northernmost point of the northern taxistrip. In early January, excavation work involving a dredger was being done there. Fuel tanks were stored beside the construction site. Originally, this installation had also been scheduled to be completed by 15 December 1952. Completion was delayed due to the frosty weather. About early December, the tanks stored at the construction sites had been checked for tightness at the request of the construction management which was not willing to take the responsibility for the tightness of the tanks.
